

Among the biggest in South India

inGenius 2017

Inter-College Hackathon

6th Edition

23rd - 24th September

[Event Brochure](#)

WHO WE ARE

Organized by the PESIT South IEEE Computer Society, inGenius is our annual inter-college hackathon.

This will be the 6th edition of this 24 hour hackathon, with over 3000 registrations to date.

The event is conducted annually during September/October over a weekend for 24 hours.

1. Our college was among the first ones in Bangalore to give students this platform and host the hackathon. (First edition was a 12-hour hackathon)
2. Today, we are among the biggest in South India registrations from multiple cities including Delhi, Kolkata, Trichy, Mangalore, Manipal and many more.

The students are supposed to develop a project in 24 hours which must be a prototype to solve a genuine problem faced in our world.

We are a platform for students in their professional degree to apply the classroom knowledge and build prototypes for meaningful products.

1. Students of all age groups, 1st years or 4th years, get a chance to convert their ideas into projects in a very challenging environment which helps them grow professionally.
2. Industry experts from various Computer Science and Electronics domain are invited and students interact with them to learn more about the industry.
3. The sponsors and partner companies hire the brightest minds for internships which makes a win-win situation. Other opportunities include getting selected in elite college clubs and forming teams of like-minded students to go on and build bigger products/projects.

HACK IDEAS

We leave the theme as an open hack. Students can build projects in any domain they desire.

IT Solutions

Majority of the students indulge in IT hacks which are in the domains of mobile, web, cloud, analytics, etc.

Hardware

Students also turn to hardware hacks which include using open source systems such as Arduino, Raspberry Pi and so on.

Statistics

Applied mathematical and statistical projects were also seen in our previous edition of this 24-hour hackathon.

We take care of all our participants over the 24 hours.

We take care of all the needs of our participants, including safety, food, entertainment, etc. Students are provided with 3 meals and snacks from our side with also the availability of stalls for them to fulfill their needs.

ABOUT US

The team

inGenius 2016 Top-10 teams

”

We are a well experienced team, looking to make a difference in the way students complete their professional courses.

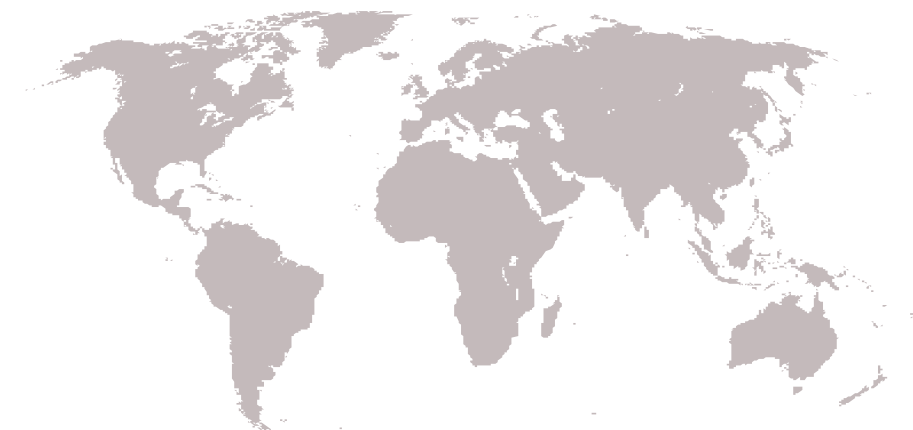

inGenius has been mentored by Dr. Snehanshu Saha, who is the Vice Chairman of Development, International Astrostatistics Association, an Ex-comm Member of IEEE COMSOC, and is also the director of the Center for Applied Mathematical Modeling and Simulation, PESIT South Campus. He has lent us immense support in growing inGenius every year.

- Rashmi Raghunath (+917259846176 | rashmi@ingeniushack.com).

THE HISTORY

In the last 4 years, we have provided people with experiences to remember.

2013

12hr hackathon in 2012, converted to 24hr on popular demand.

This year we are expected to have over 500 registrations.

Expected to be the biggest inGenius yet.

2014

Hosted over 70 teams, had over 200 people on campus.

2015

Offered internships and other opportunities to participants.

2016

Biggest ever inGenius with over 300 registrations and 1 Million lines of code written.

inGenius 2017 intends to reach to more colleges, more cities, and more students. All registered teams must submit their hack ideas and are shortlisted based on them. Shortlisted teams are invited to hack on campus.

While we grow bigger and better, we understand the fundamental reason of this event and continue to achieve it.

WHO WON LAST TIME?

Each year, the participants surprise us coming with bigger and better ideas. Below are the ideas of top 2 teams.

A.I.

TeamName Exception
(1st place)

idea - An A.I., that automatically produces running commentary when you feed in the live video of a cricket match. This idea can be extremely useful in websites like cricinfo.com, where in people manually type in comments after each ball in the match. This is also used in places where in, a huge amount of data can't be spent to watch the match video.

ZDRAVO

deafeningSilence
(2nd place)

We plan to call our project [a mobile application] "ZDRAVO" (which means "hello" in serbian). ZDRAVO will integrate calling and texting functionalities by allowing every call you make to get dispatched with a short message indicating the subject of your call, similar to an email. This way the receiver of your call knows why you are calling, and can thus decide whether or no accept it. We plan on implementing our idea through Android Studio.

WHAT THEY SAY

Over the years we have always been praised. See below what a few of our previous participants have had to say.

" inGenius was a platform for me to improve myself as a developer and researcher.

— Suryoday Basak

Participant (2013 and 2015)
Runner up (2014)
Organizer (2016)

" inGenius helped me learn something that I usually wouldn't in class. It's an amazing platform for budding tech enthusiasts to show off their skills as well as learn a lot in the process.

— Harsha Vamsi

Participant (2015)
Organizer (2016 & 2017)

Do you have what it takes?

Come and participate and be involved in an event that can help make your future.
